

ALPINE TREAT PURE –

CONDELI OPTS FOR ETIMEX CONVINA PP-BARRIER TRAYS AS A MONO-SOLUTION

With its unique production process Condeli has developed the alpine specialty par excellence – „Käsespätzle“ in various flavors. The practical 400g packs for singles or as a side dish are prepared in the microwave and ready-to-eat within 3–4 minutes. The tray plays a crucial role in this new product. „Our customers are rightly becoming more and more demanding. An optically flawless PP mono-packaging with an oxygen barrier and a modern, sales-promoting design are a must nowadays. The tray must be optimal to unstack, have a perfect machinability on all packaging lines and the sealed seam must be 100% safe and tight“ says Martin Rank, Head of Sales & Marketing at ETIMEX. Thanks to the EVOH layer, the shelf life of the product is absolutely guaranteed from the time of production to the end use while maintaining the cold chain at 4–7°C. In addition, the tray offers an excellent barrier against moisture, oxygen and UV rays. All in all, a highly complex and sophisticated masterpiece made of plastic. The Pasta Bowl made of PP-barrier is 100% recyclable.

The ETIMEX PRIMARY PACKAGING GMBH is part of the ETIMEX Group and for more than 70 years, it has been developing and producing films and trays made of various plastics for applications in packaging solutions for the food and pharmaceutical industries as well as films for technical applications.

Condeli is a 100% subsidiary of Hochreiter Lebensmittelbetriebe GmbH. The family business Hochreiter has stood for the best quality from Austria for more than half a century.
