

## LIGHTWEIGHT, DURABLE, SAFE AND 100% RECYCLABLE

LABORATORIOS ALMOND (MURCIA, SPAIN) HAS COMPLETED ITS MARKET-LAUNCH PREPARATIONS FOR ITS VEGETABLE-JOGHURT-LINE ECOMIL BIOGURT

Laboratorios Almond has decided in favour of ETIMEX Primary Packaging GmbH, renowned for its 100% sustainable, high-quality and recyclable packaging solutions, to provide packaging for its high-class product EcoMil Biogurt. For its Spanish customer ETIMEX injection- and blow-moulds white PP / EVOH / PP at its production site in Dietenheim.

Owing to the EVOH layer, the conservation of the product is absolutely guaranteed from the time of filling up to its consumption, provided that it is optimally stored and cooled. Moreover, the multi-layer film guarantees an excellent barrier against humidity, oxygen and ultraviolet rays. The base material is resistant to thermal processes and thus suited for hot filling.

For Laboratories Almond ETIMEX has developed a series of containers showing high functionality and quality, among which the 480 ml cup represents a particular highlight. It has an APET lid allowing the consumer to close the container after opening, refrigerate it and finish it at a later point of time. The container's rough surface appeals to customers and provides very good tactile sensitivity.

The thermoformed cup features a great height compared to its diameter. Despite this fact ETIMEX guarantees exceptional quality due to optimal material distribution ensuring complete protection of the product and first-class stability of the container as well as easy stacking. The cups are sealed with peelable films.

The quality and properties characterizing the plastic material used by ETIMEX make each mono container 100% recyclable. Furthermore, the container's light weight and durability make it a highly efficient product.

Without doubt the final product is an eye-catcher no matter where it is placed in a supermarket shelf and it is very attractive for customers looking for natural and high-quality foods.
